

Enr. No. : 2302030430097

Assignment : 1

[Ans 1 :]

Step 1: Navigate to “+” -> “New repository” button to create a new repository.

Step 2 : Give the name of the repository. Make it public or private by clicking on the given options. Add a README file if you want to. After that click on the “Create repository” button.

The screenshot shows the GitHub 'Create a new repository' page. The browser address bar shows 'github.com/new'. The page title is 'Create a new repository'. Below the title, there is a sub-header 'A repository contains all project files, including the revision history. Already have a project repository elsewhere?' and a link 'Import a repository.'. A note states 'Required fields are marked with an asterisk (*)'. The 'Owner' field is set to '97-prachi'. The 'Repository name' field is empty. A hint suggests 'Great repository names are short and memorable. Need inspiration? How about laughing-octo-pancake?'. The 'Description (optional)' field is empty. Under 'Visibility', the 'Public' radio button is selected, with the text 'Anyone on the internet can see this repository. You choose who can commit.' Below it, the 'Private' radio button is unselected, with the text 'You choose who can see and commit to this repository.'. Under 'Initialize this repository with:', the 'Add a README file' checkbox is checked, with the text 'This is where you can write a long description for your project. Learn more about READMEs.' Below that, the 'Add .gitignore' section shows a dropdown menu for '.gitignore template:' set to 'None', with the text 'Choose which files not to track from a list of templates. Learn more about ignoring files.' At the bottom, there is a 'Choose a license' section. The Windows taskbar at the bottom shows the date and time as 09:05 PM on 29-02-2024.

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere?
[Import a repository.](#)

Required fields are marked with an asterisk (*).

Owner ^{*} Repository name ^{*}

97-prachi /

Great repository names are short and memorable. Need inspiration? How about [laughing-octo-pancake](#) ?

Description (optional)

☒ Public
Anyone on the internet can see this repository. You choose who can commit.

☐ Private
You choose who can see and commit to this repository.

Initialize this repository with:

☒ Add a README file
This is where you can write a long description for your project. [Learn more about READMEs.](#)

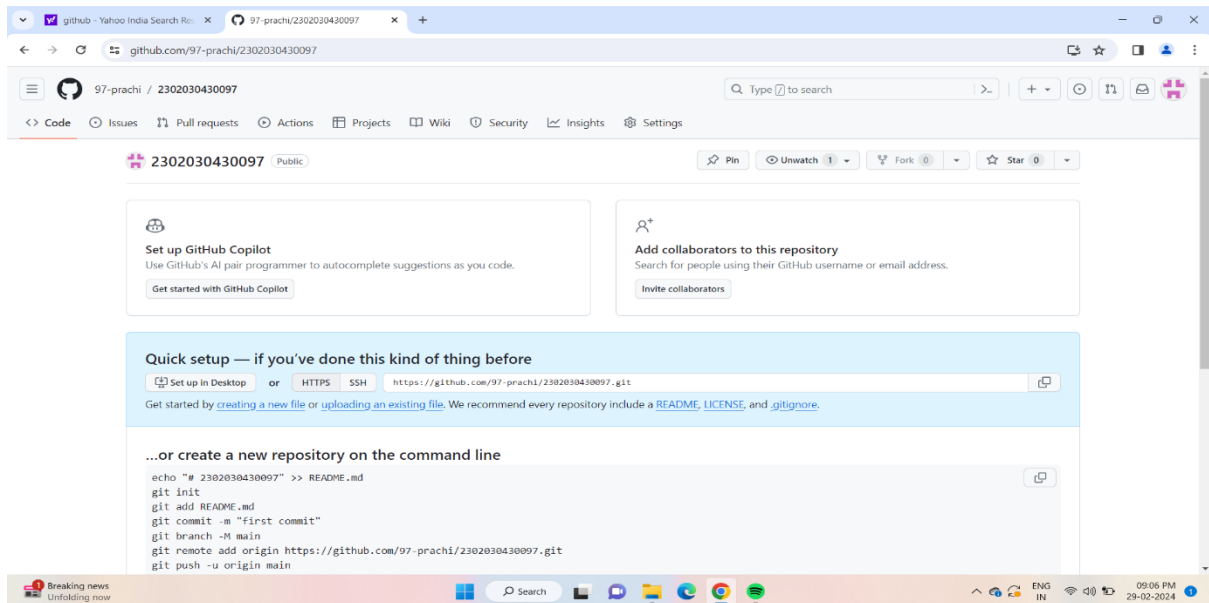

Add .gitignore

.gitignore template: None

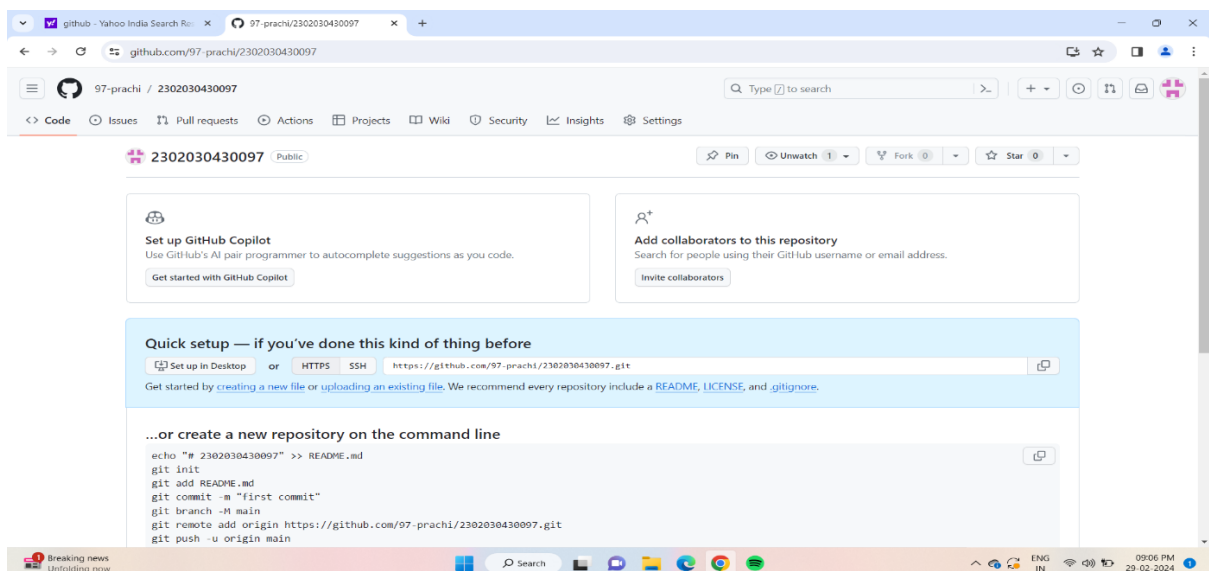

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

Choose a license

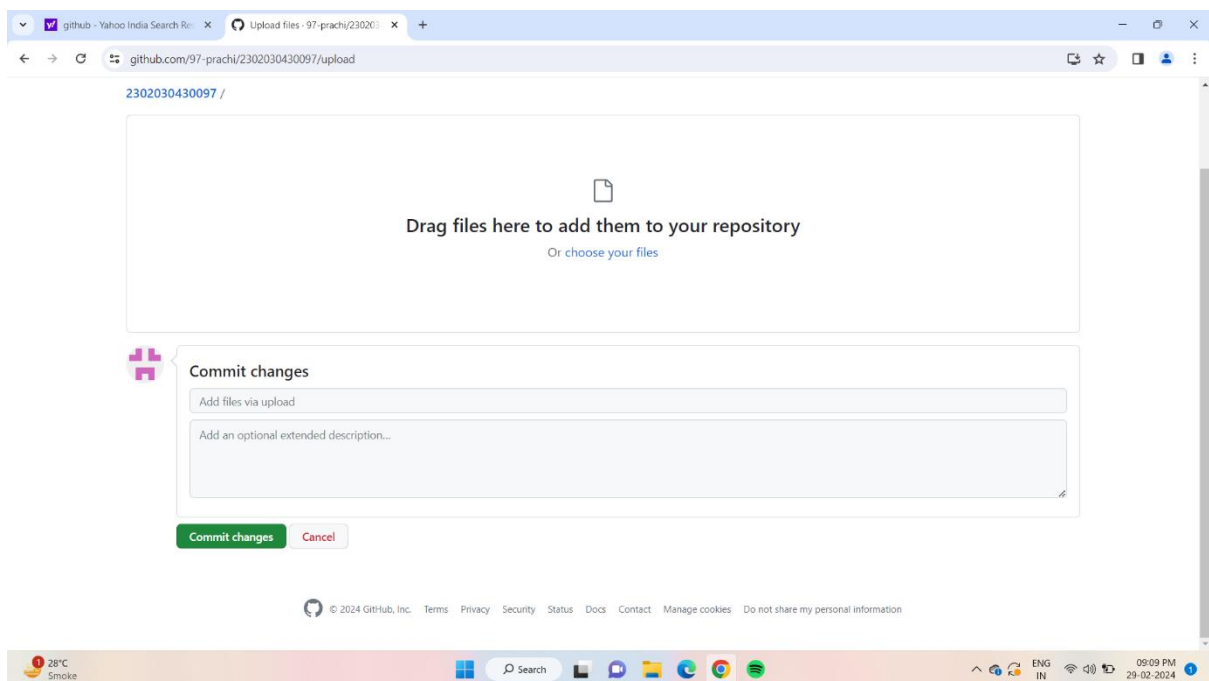

Like that, your GitHub repository has been created successfully.

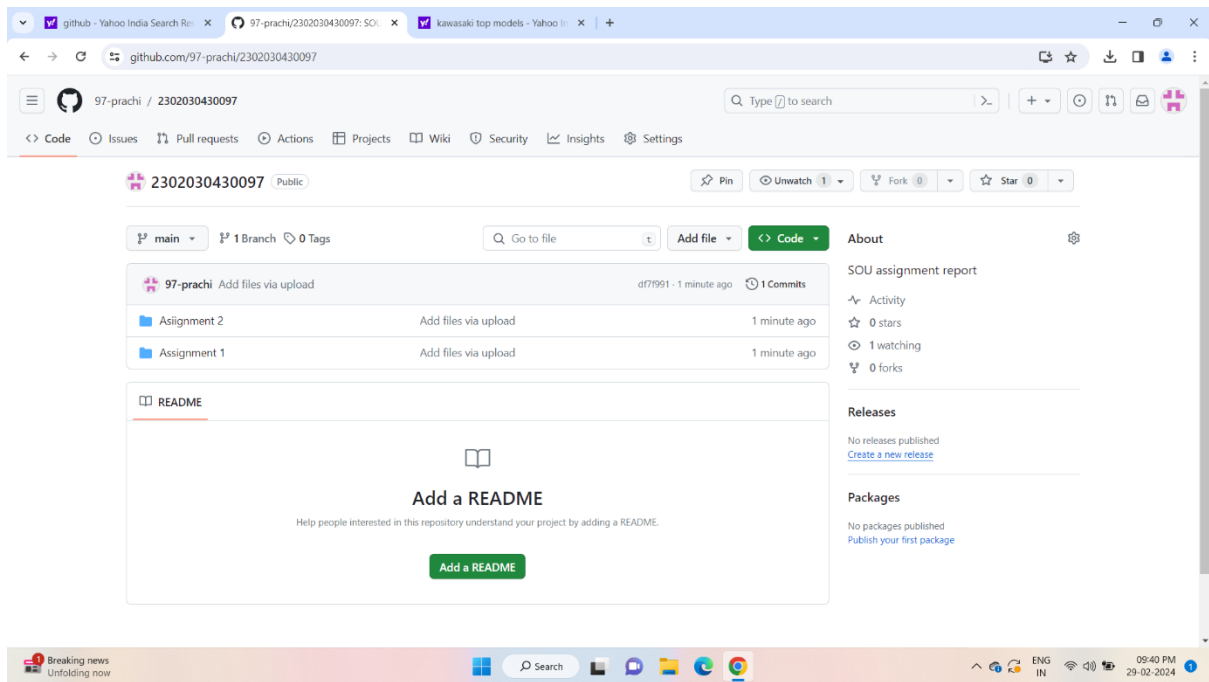

Step 3 : Scroll down and you will see the option for importing code.

Click on “uploading an existing file” and you can start importing the code files and folders to your REPO or follow the commands and execute them.

Or you can Click on “choose files” then select files or folders and upload them.

Do not forget to commit changes every time you change
